

Software Engineer

Kiiio Inc.

Kiiio is a Madison-based digital healthcare company focused on improving the lives of those with chronic pain through evidence-based, consumer-centric solutions. Our customers include health insurance plans and employers.

Summary/Objective

Kiiio is seeking an energetic, intelligent, motivated individual to join our development team and grow with the company. At Kiiio, Software Engineers assist with software design and product development. There are opportunities to work on Kiiio's backend services, web apps, and mobile applications. Individuals may specialize in a particular area or move between projects depending on interest and customer need. All team members work closely to ensure seamless integration and consistently excellent results.

As an integral member of the development team, this individual will work closely with product management, sales, quality assurance, and marketing to help realize the vision of Kiiio's solutions and deliver to Kiiio's product roadmaps.

Essential Functions

Reasonable accommodations may be made to enable individuals with disabilities to perform the essential functions.

1. Assist in the development of Kiiio's services and applications ensuring professional presentation, consistent operation, and efficient integration with all aspects of Kiiio's Health Engagement Platform
2. Provide input into product architecture and design decisions to ensure seamless operation and integration throughout Kiiio's solutions
3. Implement product requests meeting customer requirements documented by Product Management using industry standards and best practices

4. Design, build, and maintain efficient, reusable, reliable and tested code
5. Work interactively with Quality Assurance to streamline the development lifecycle and ensure any required updates are addressed in a timely manner

Competencies

- Background in one or more of the following:
 - Demonstrated experience with C# applications
 - Experience developing frontend applications using Angular, AngularJS, TypeScript, JavaScript, CSS and HTML
 - Proven experience with Android and/or iOS development
 - Exposure to using SQL Server for data management
- Knowledge of best practices for developing cloud-based solutions
- Skillful in designing, implementing, and testing commercial applications
- Familiarity with Visual Studio and VS Code preferred
- Exposure to Xamarin Studio would be beneficial
- Knowledge of Azure and hosted application management preferred

Supervisory Responsibility

- No formal direct reports
- Mentoring opportunities exist

Travel

No travel expected

Required Education and Experience

- BS in Computer Science or related experience
- At least three years of software development background

Additional Eligibility Qualifications

- Mature individual with an ability to work under pressure
- Strong work ethic with pride in team & corporate accomplishments
- Interested in personal and professional growth within a team environment
- Possess personal qualities of integrity, credibility, and commitment to customers
- Work flexibility and interest in a variety of projects
